*«It was during a walk with my friend Nickolay. Despite the fact that it was summer, the weather was really autumnal, gloomy. We were going along the route – the forest belt, and then, in an instant, the forest went apart, and we found ourselves at the place, where the giants had been living. Steel silent idols were in fact the power line towers. A light twilight; the magnificence of the giants, who stood with their legs wide apart and arms outstretched aside to hold power lines firmly. With their heads they propped up the sky, as if emphasizing their greatness and significance. Are they lonely and silent? Not at all! They are talking to each other: slowly, in a low voice. They are wired!»*
